K- Span and Polycarbonate Parking Shade

مظلات كويك سبان وبولي كاربونيت

The K-Span structure is ideal choice for constructing metal structure in quick and cost-effective way. It can be altered in size and shape according to the application requirement. K-Span arches are designed to be self-supported and not require additional support structure compared to the conventional steel structure. Polycarbonate panels are used in K-Span structure as well. It provides resistant to hot temperature, sunlight, and rain. This enables the panels to last for many years without fading or discoloring while also remaining damage free from any various impacts over the years.

Playground Shade

مظلات لساحة المدارس

Playgrounds offer a naturally exciting place for children to play and adults to gather. In today's world, shade structures are critical for outdoor playgrounds, helping to protect children and play equipment from the harmful effects of the sun. Whether it's at a neighborhood park, elementary school, or faith-based center, our shade structures can provide functional shade and vibrant aesthetics to cover virtually any playground.

Sail Type Shade

المظلات الشراعية

Shade sails are a type of canopy, usually in the shape of a rectangle or triangle. They use a flexible fabric tensioned across anchor points (support poles and/or existing structures like a building, house, or roof). They can cover large areas at a fraction of the time and cost as other canopy structures. They're especially effective in shading outdoor areas with greater sun exposure. Shade sails are great for playgrounds, pools, seating areas, gardens, and anywhere else a canopy is needed

Umbrella

شمسية

Offset outdoor umbrellas, also known as cantilevers, feature an arched or jointed pole positioned off to one side. The canopy is supported from the side and above, which allows it to hang freely over a variety of seating and table configurations. The main benefit of modern cantilever umbrellas is that they can shade a large area without the obstruction that a center pole causes. This is especially important if you are shading a dining table that does not have an umbrella hole.

Pergola

البرجولا

A pergola is an outdoor structure consisting of columns that support a roofing grid of beams. This roofing grid may be left open or covered so as to create an area sheltered from the elements. Pergolas may be freestanding or attached to a house. It is made of either wooden painted steel or aluminum. The roof can be covered using either polycarbonate sheets, PVC fabric, or aluminum bars.

Acrylic Fabric

قماش اكريليك

The acrylic waterproof canvas fabric is perfect for all types of indoor and outdoor use. The colors in this fabric are extremely UV resistant and remain permanent and bright for many years. The fabric also has mold resistant qualities (mildew grows on dirt, pollen and other organic matter, so simple routine cleanings will prevent mildew from forming). In addition, the solution-dyed acrylic waterproof fabric can be easily cleaned to remove stains without compromising color. This fabric is suitable for awnings, canopies, pergolas, garden tents, swimming pool furniture.
